

# Switch Fibre Channel Fault Alarm

## Overview

Check the controller port status for Tx value is good, replace SFP if Tx signal power is low. Replace FC cable if SFP Tx power is normal for both FC end side, but SFP Rx power is low. This document describes how to troubleshoot fiber optic interfaces by addressing some of the fiber optic module and cabling specifications. The information in this document is based on all Catalyst 9000 Series switches. This includes Doppler. A Fibre Channel link failure may cause service interruption and data loss between the application server and the storage system. On the system page, click to display the rear view. On the rear view of the storage device, click the interface module in. [Node1: fct\_tpd\_work\_thread\_0: scsitarget. [Node1:. Use the following guidelines and suggested steps to help resolve Fibre Channel switch onboarding issues.
