

Transmission Rate of Multimode Optical Module

Overview

Multi-mode optical fiber is a type of optical fiber mostly used for communication over short distances, such as within a building or on a campus. Understanding their key parameters isn't just technical jargon – it's critical for ensuring compatibility, performance, and reliability in your data center. R&M offers the full range of multimode fibers for all its cables, whether for installations or assemblies. Apart from the OM1 type, all of them are bending-optimized fiber incorporating technology to deliver enhanced macro-bending performance produced by a unique Plasma Chemical Vapor Deposition. Network Switch Networking Devices Optics and Transceivers Fiber Optic Cables Copper Cables Patch Panels, Cassettes, Enclosures Testers and Tools Optical Networking Devices Power Newsroom Home HPC Data Center Enterprise Network Cabling WDM, OTN, PON Software Hardware Newsroom Home/ Cabling/ Fiber Optic. This phenomenon is called modal dispersion of optical fiber, also known as intermodal dispersion. These modules convert electrical signals into optical signals for transmission and then convert.
