

Upgraded version of integrated wiring cabinet for security use

Overview

By integrating power supply, battery charging, and fused power distribution into a single wall-mounted enclosure, SecurBox streamlines deployment, reduces on-site wiring, and improves installation consistency. The Vertiv™ SmartCabinet™ ID is an all-in-one micro data center that has been designed specifically for demanding environments. The robust IP54 rated cabinet provides environmental protection from harsh applications where dust and humidity could severely impact system performance and equipment. ICT's wide range of enclosures enable you to get the most out of your Protege hardware. All DIN Rail enclosures have a removable door for fast simple mounting and maintenance, with space provided above and below the DIN module locations for finger trunking or use of the cable tie points for secure. The upgrade of electrical equipment is an essential activity to ensure that the electrical cabinets and safety control panels of machines are consistent with the applicable safety requirements and with the actual state of the plant. The control room is considered one of the most critical areas in any facility, impacting daily decision-making and overall. Trasccon specializes in electronic cabinet integration solutions tailored to your system architecture, compliance standards, and functionality needs.
