

What are the specifications and models of ceramic ferrules

Overview

Custom Ferrules are made of alumina or zirconia ceramics, with inside diameters from 80 microns to 1100 microns, in lengths from 2. 5mm, and with features such as multi-step, countersinks, flats, slots, grooves, and chamfers. All Standard Ferrules are precision manufactured according to strict quality standards. The diameter, length and design vary with every boiler. The Specifications given below are common but not limited to. Maximum 1450 Deg Celsius to 1650 Deg Celsius. Highly corrosive environment and higher Initial costs limits the usage. Blasch's shape making capability allows us to engineer round and hex ferrules to meet your boiler specifications and application. For more information or to. Ceramic ferrules and sleeves are often used in optical connectors, attenuators, fiber stubs, and other optoelectronics requiring low signal loss. Available zirconia ferrule types from Sinocomms are SC, FC, LC, ST, MU, SMA.
