This guide describes wiring color codes, international standards, and main rules to keep. What is a Yellow Electrical Wire: Understanding Its Use and Significance in Wiring Systems. A yellow electrical wire is typically used for 12-gauge circuits, which can handle up to 20. Use different cable colours to denote data classification levels within Dod: Even patch cable colours are not standardised, although some industries (such as the University of Wisconsin Network Services Department) use standards such as band colouring: Darkish Grey: This represents the standard. The standard colors used for electrical wires in most homes are black, red, blue, yellow, white, gray, green, and sometimes bare copper wires.
