

What is a cable optical fiber unit

Overview

ONU stands for Optical Network Unit. In simple terms, it's a device that receives the optical signal from your Internet Service Provider (ISP) via a fiber optic cable and converts it into electrical signals that your router, computer, phone, and other devices can understand and. ONU stands for Optical Network Unit. The light is a form of carrier wave that is modulated to carry information. Born for efficient last-mile connectivity, it powers broadband services, smart cities, and diverse industries. Unlike copper wires, which are limited by lower data transmission speeds, shorter transmission distances, and higher susceptibility to electromagnetic. Optical fiber is a technology used to transmit data by sending short light pulses along a long fiber, which is typically made of glass or plastic. In optical fiber communication, metal wires are preferred for transmission because the signals travel more safely.
