

What is a steel cable tray

✓ 50KW/100KWH

✓ HIGHER POWER OUTPUT
IN OFF-GRID MODE

✓ CONVENIENT OPERATION
& MAINTENANCE

✓ PRE-WIRED

Overview

The cable trays consist of a thin metallic plate and electro-welded steel rods. Their construction is based on the international standard IEC 61537, which specifies the requirements for cable tray systems, tests, and specifications. Today, electrical cable trays have become an essential component in industrial and commercial construction, providing a quick, economical, and. What is a cable tray?

A cable tray is a structural system used to support and manage electrical cables in various settings, such as industrial, commercial, and residential environments. What is the role of a cable tray in electrical engineering?

A cable tray allows for the neat and aesthetic arrangement of cables, improves the reliability. Cable trays are mechanical support systems that provide a rigid structural system for electrical cables, raceways, and insulated conductors used for electric power distribution, control, signal instrumentation, and communication.

Cable tray

Common cable trays are made of galvanized steel, stainless steel, aluminum, or glass-fiber reinforced plastic. The material for a given application is chosen based on where it will be used. Galvanized tray may be made of pre-galvanized steel sheet fabricated into tray, or may be hot-dip galvanized after fabrication. When galvanized tray is cut to length in the field, usually the cut surface will be painted with a zinc-rich compound to protect the metal from corrosion.
