

What is the box for connecting a network cable to a fiber optic cable called

Overview

A fiber optic junction box, also known as a fiber optic distribution box or termination box, is a protective enclosure that facilitates the connection and management of fiber optic cables. It is the connection point between your Internet Service Provider's (ISP) network and your home network. An ONT device is critical in a fiber-to-the-premises (FTTP). The terminal box is a fiber management product used to distribute and protect optical fiber links in FTTH networks. It is small, so it is considered a mini version of the optical distribution frame or optical distribution frame (ODF). There are several lights on the ONT, when these lights change colour or flash, it means something is happening., Cat 6a) to fiber and back again. The typical use case for this is to either extend the transmission distance or to segment your network, protecting it from electrical. In broadband optical fiber access network, we often see the all kinds of fiber box such as fiber cabinet, fiber optic distribution box, fiber optic terminal box, multimedia box, and customer box.
