

What is the working principle of custom fiber optic patch cords

Overview

The fundamental working principle of an optical fiber patch cord lies in the phenomenon of total internal reflection. This guide will help you quickly understand the main types of fiber patch cords and how to choose the right solution for your project – and how ZION can support you with stable quality, flexible customization and global supply. Essentially, it is a length of optical fiber with connectors on either end, designed to connect optical devices, such as routers, switches, or. Optical Fiber Patch Cord is the cable assemblies with connector plugs at both ends, used to achieve flexible and plug-and-play fiber optic connections between devices or between devices and fiber optic patch panels. It consists of a core with a high refractive index, enveloped by a coating featuring a lower refractive index. At Gcabling, our advanced manufacturing and strict quality control processes ensure.
