

What materials are used in the optical module lens

Overview

Three prominent materials used in lens fabrication are glass, plastics, and infrared crystals such as Calcium Fluoride (CaF_2) and Zinc Selenide (ZnSe). Different materials have different optical properties, including refractive index, dispersion and transmission. These are usually ordered from an optical glass company. Eyeglasses also serve an important role in protecting. At Shape Optics Technologies Pte Ltd (SOT), we offer a comprehensive range of optical lens materials designed to meet diverse performance, wavelength, environmental, and cost requirements. Selecting the right substrate is critical to achieving high transmission, durability, and overall optical. Optical lenses are fundamental components in cameras, laser systems, microscopes, semiconductor equipment, and precision sensors.

Lens Materials: Glass vs Plastics vs IR Crystals (CaF₂/ZnSe)

Three prominent materials used in lens fabrication are glass, plastics, and infrared crystals such as Calcium Fluoride (CaF₂) and Zinc Selenide (ZnSe). Each of these materials offers distinct

Dec 11, 2025

Optical Material

Optical materials are defined as substances that alter or control electromagnetic radiation in the ultraviolet, visible, or infrared spectral regions, and are used to fabricate optical elements like

Oct 06, 2025

The Key External Components of Optical Modules

An optical module serves as the backbone of modern fiber-optic communication. Its appearance often resembles a compact rectangular device,

Mar 16, 2026

Optical module

An optical module is a typically hot-pluggable optical transceiver used in high-bandwidth data communications applications. Optical modules typically have an electrical interface on the side that

Jun 10, 2026

Lens Processing: from Raw Materials to Precision Optical Components

The raw materials of the lens are usually optical glass or optical plastic. Optical glass has high transmittance, low dispersion and good chemical stability, which is suitable for high-precision optical

Sep 01, 2025

What Is An Optical Module?

An optical module converts electrical signals to light for fast, reliable data transfer in networks, essential for cloud computing, telecom, and data centers.
