

What type of connector should be used for aluminum alloy optical cables

Overview

The SC type is square-shaped, easy to connect, widely used, and has low reflection loss. External components, connector shells and inserts are often metal and can be aluminum, stainless steel, brass, titanium, or even composite to meet the demanding harsh environment conditions. Aluminum is the material manufacturers primarily use to satisfy both environmental and interconnect. A fiber optic connector is a mechanical device used to align and join optical fibers, enabling light to pass through with minimal loss. An optical fiber connector enables quicker connection and disconnection than splicing. They come in various types like SC, LC, ST, and MTP, each designed for specific. There are many different types of connectors available, each with their own pros and cons, depending on where the fiber is installed and the operating environment it is used in.
