

# What voltage level indicates a low voltage busbar

## Overview

Low Voltage Busbars: Refer to busbars with a rated voltage below 1kV, commonly 220V and 380V, widely used in industrial and commercial building distribution systems. IEC 61439 is a standard developed by the International Electrotechnical Commission (IEC) that covers design verification for low-voltage electrical products and assemblies. Low voltage busbars are used in systems where the voltage level is below 1000 volts. These busbars serve. Distinguishing high and low voltage busbars involves electrical parameters, material selection, design standards, and performance in practical applications. Understanding these characteristics helps engineers and manufacturers choose the appropriate busbar type to meet specific application needs. 1) One package contains 2 busbar supports including inlay parts for bar thickness 5 mm and lateral finger-safe covers.
