

Which type of fire-resistant cable tray is best in Southern Europe

Overview

Fiberglass cable trays offer excellent fire ratings and are non-corrosive, making them suitable for challenging environments such as chemical plants or coastal areas. However, they may not support as much weight as steel or aluminum options. Cablofil cable tray is the preferred choice for the cable containment of low and high voltage electric cables where fire resistance is crucial - this includes cable basket tray systems for Prysmian FP (FP400 and FP600) and Draka Firetuf type cables. Data centers house sensitive equipment such as servers, switches, and storage devices, all of which require a constant and reliable power. -piece tray is typically used in applications where visual esthetics are important. It is used in a range of applications with sp nch runs from the main cable tray system to electrical devices or other equipment. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed to si osure, overheating or. Basor Electric, sensitive to the need to minimize the consequences of a fire, has subjected its cable trays to rigorous fire resistance tests to ensure the behavior of its products.
